

ABSTRACT

5 A published document comprises a printed document and at least one memory
attached to the printed document, wherein said at least one memory comprises an
electrical circuit without an integral power source but may be powered wirelessly so
that it may transmit information wirelessly, wherein at least a portion of the
information stored in the published document for display to the user is provided in
said at least one memory. A method of viewing information in such a published
10 document comprises viewing information printed in the printed document, powering
the memory circuit with a reader device to transmit information stored in the memory
circuit to the reader device wirelessly, and displaying the information stored in the
memory circuit by means of the reader device for viewing by the user. An
appropriate reader device and method for publishing the document are described.
